

7/16 DIN Male Open Calibration Kit Component for Precision Up to 7.5 GHz

7/16 DIN male open calibration kit component, part number FMSC3032, from Fairview Microwave is in-stock and ships same day. This 7/16 DIN precision open circuit can be used for calibration of most vector network analyzers (VNA), cable analyzers or site analyzers. Coefficients for this 7/16 DIN open calibrating component are provided in the datasheet. These can be entered into most VNAs to provide the necessary corrections, thereby allowing replacement of misplaced or damaged calibration components. Precision control of the impedance and electrical length allow for OSLT analyzer calibrations over the complete frequency range of the connector interface provided.

Fairview's 7/16 DIN open circuit calibration component FMSC3032 datasheet specifications and outline drawing are shown in this PDF below. Our extensive offering for RF, microwave and millimeter wave components allows designers to configure and customize their test solutions however they like. From calibration kit replacement to SOLT / OSLT VNA calibration, Fairview Microwave has the right calibration kit components to meet your needs and ship them same-day.
